

Propagation Monitor

The Propagation Monitor displays the propagation status when updating works, names, or list terms that are linked to items.

You can access the Propagation Monitor by selecting Activity Monitors then selecting the Propagation Monitor tab. The Propagation Monitor displays the username that performed the update, date of update, propagation status, updated term ID, term type, and a batch ID.

Report any errors in the Propagation Monitor to forumsupport@jstor.org and include the information detailed in the error log of the Propagation Monitor.
